

SOPHISTICATED BOOKLETS WITH PROFESSIONAL TRIM AND FLATTENING

Print providers looking to produce professionally trimmed booklets should consider the SDD PT-220 face trimmer. In addition to trimming the booklet face, this system applies pressure at the spine to flatten the booklet. Not only does this give finished booklets a more sophisticated appearance – as they lie flat, they are also much easier to stack, pack and handle. With its capabilities of face trimming and flattening booklets of up to 20 sheets (80 gsm paper) in sizes A5 to SRA4, the PT-220 perfectly complements the FS-532 finisher and the SD-510 booklet-making unit, turning this combination into true high-end equipment. For an even sleeker finish, a BookFold module can also be added to create square spine booklets.

For example: Booklet making for professionally finished brochures

Key features

- Produces consistently pressed and trimmed booklets
- Patented additional press/folding module
- Easy to operate
- Automatic format change
- Adjustable trim size
- Smart and fast knife exchange
- Optical and physical interface (with error signal)
- Straightforward connection/installation behind the printer
- Compatible with colour as well as black & white production printers
- Optimises the overall production quality
- BookFold module can be added to create a square spine booklet
